Better Quality Water...No Hassle!

Why buy a Bottle-less Water Cooler?

- ◆ **Convenience:** Corrigan Water Solutions offers the ultimate convenience.

No delivery men!

No weekly invoices!

No empty bottles lying around!

No lifting or carrying heavy bottles!

No more searching for places to store bulky bottles!

Eliminate the risk of worker's compensation claims due to misplaced bottles!

- ◆ **Cost:** Corrigan Water Solutions Bottle-less Cooler can be significantly less expensive than bottled water. With most leading bottled water companies the cost changes month to month due to water consumption, bottle deposits, and surcharges. With the Bottle-less Cooler, the monthly cost does NOT increase as consumption increases and the rental price is a flat fee. This also eliminates the hassle of weekly invoices as our billing system is either every 2 months or every 6 months. The rental fee includes filter changes and preventative maintenance twice a year. Once the cooler is installed, we take care of everything.
- ◆ **Health:** Recently, there has been growing concern about the quality of water we drink, both from the tap and from bottles. With health care providers recommending a considerable eight-8 oz. servings of water each day, the demand for quality drinking water continues to increase. A national survey among 500 human resource managers indicates that there is a clear desire for treated drinking water among employees. Two-thirds responded their tap water quality was bad or fair. Nearly 60% of those surveyed believe the water they drink can affect their health.

Corrigan Water Solution's Bottle-less Coolers use state-of-the-art water purification processes that produce virtually pure water. The system uses multiple stages of filtration including Reverse Osmosis. Reverse Osmosis forces the water through a semi-permeable membrane, which separates the dissolved impurities from the pure water and rinses the impurities down the drain. In fact, Reverse Osmosis is the same method by which many bottled water companies purify their water before bottling. It is the most cost-effective method of purification and approaches distillation in purity without the expense of electricity. The RO unit effectively removes the following types of impurities:

1. Particulate matter, turbidity, sediment etc.
2. Colloidal matter
3. Total Dissolved Solids
4. Lead
5. Arsenic
6. Microorganisms
7. Asbestos
8. Pesticides and Herbicides
9. Heavier organic molecules
